Welcome to our online edition of SEU MUG. Through this newsletter you are able to receive subscriber-only material such as special notes from the Users Group leaders, Podcasts, and detailed step-by-step instructions with pictures of demos given during meetings. If you have any questions, comments, concerns or suggestions please send all e-mail to seumug@gmail.com.

This edition of SEU MUG online is an overview of our sixth meeting. This week Vice-President Madison Beresford gave a keynote on shareware apps. These applications included Handbrake Lite, Google Earth, and AppZapper.

Handbrake is a piece of software that allows you to backup your DVD movies safely onto your computer. Because this is fairly easy to do, you can also compress them just as easily for your video capable iPod and keep them there. Handbrake is a Mac OS X application and can be acquired at: <http://handbrake.m0k.org/> On the Windows side of things, you will be able to download Videora. Videora has the same functionality of Handbrake and is made specifically for the video capable iPod. You may download Videora from: <http://www.videora.com/en-us/Converter/iPod/>

Google Earth is another free application for both Windows XP and Mac OS X that you can get from:

<http://www.google.com/downloads>. This app allows you to zoom

in on just about any part of the world! Say you want to see your back yard at a moments notice, well you can! Just enter in your address and you're there. Although it's not the most productive piece of software, it's a great way to kill time and find statistics on say, the crime rate in your town, or find all the local restaurants in a single click. Pretty nifty.

We had the pleasure of having Austin Sarner come in to demo an application that he developed called AppZapper. This is Mac OS X only application currently. Essentially, AppZapper will find all associated files for an application and delete them while the normal drag to Trash and empty would not. This helps with managing hard drive space on your computer, and seeing exactly what is put on your system when you install an application. Download it at: <http://appzapper.com>.

The next time we meet, we plan to have Jason Brown give us a demo on the innovative Garageband studio recording software.

If ever you have a question about your Mac or PC, or anything technology related, feel free to send us an email at: seumug@gmail.com.
